IT'S TIME TO SHINE

The time for commercial holiday lighting is now!

If you are reading this its already too late for custom commercial holiday décor, but there are always some good potentials last minute fixes:

Ask your preferred lighting contractor if they can add any of the following:

- Accent Rooflines with LED lights to a shopping center
 - Figure 1-2 days of fastening light clips, assembling bulbs and sockets
 - 1-2 days for staging the lights and running sources to power
- Lighting statement trees to courtyards, food courts and monument areas
 - Have trees pruned ASAP
 - 2-4 days of staging lights

They can be left unplugged its ready to plug in November. We actually do our shop assembly form February thru June and start staging lights the day after Labor Day. This is the only way we can successfully light over 100 shopping centers and have them seemingly all turn on in the same week.

With most any determined effort there is always a way to squeeze in another project if it drops in the month of October. Perhaps you have a great landscaper, tree trimmer or electrician that could add some light just in time for you? We order our container of lights early last year and actually keep a healthy stock ready for contractors pulling in the last-minute projects.

***Happy to help with any last-minute requests,
just don't wait any longer by calling in November!***

Lighting quick facts:

Expand your mind with these riviting, and kinda random, facts

- The most efficient lighting comes from fireflies! Almost all the energy from their chemical process generates light
- Humans are capable of seeing UV light, but the light is filtered out by our eye's lens
- Light travels ia completely straight line, but when it hits and object it will bend
- The unit of time when light travel 1 cm in a vacuum is called a 'jiffy'. See you then!
